

## Join Our Team as a Product Development Engineer at Pluss Advanced Technologies!

Are you passionate about sustainable energy solutions and innovative technology? Pluss Advanced Technologies B.V. ([www.plussat.eu](http://www.plussat.eu)) is on the lookout for a talented Product Development Engineer to help us revolutionize the way buildings manage energy consumption using Phase Change Materials (PCM).

### About Us:

At Pluss Advanced Technologies, we develop, produce, and sell PCM across the EMEA region. Our PCM products act as thermal batteries, offering efficient hot and cold storage solutions that save energy and promote sustainability. Imagine cooling offices with passive climate ceilings that are cost-effective, comfortable, and require minimal electricity, or using PCM to create compact heat batteries that are four times smaller than traditional hot water buffers.

We collaborate with international customers in the HVAC industry and participate in national and European research projects alongside universities and industrial partners. Our mission is to develop cutting-edge thermal storage applications that make buildings more energy-efficient and environmentally friendly.

### Your Role:

As our Product Development Engineer, you will be the technical mastermind behind our projects. You will coordinate and provide solutions to the “how” questions in our numerous application development projects. Your work will involve close collaboration with our team in 's-Hertogenbosch, Netherlands, and our development partners. While you have the flexibility to work remotely within the target area, regular presence at our office is essential, especially during the initial phase.

### What We're Looking For:

We seek a proactive, challenge-driven individual who thrives in a collaborative environment. Your technical expertise and passion for sustainability will be crucial in driving our projects forward. Here are the qualities and skills we value:

- **Technical Background:** Education and experience in engineering, with a focus on building environments.
- **HVAC Knowledge:** Familiarity with current HVAC energy systems like heat pumps, AC, solar-thermal, and geothermal technologies.
- **Analytical & Accurate:** Strong problem-solving abilities and attention to detail.
- **Proactive & Result-Oriented:** A drive to achieve results and take initiative.
- **Team Player:** Ability to work effectively within a team.
- **Excellent Communication:** Proficiency in English (additional languages are a plus).
- **Passion for Sustainability:** Enthusiasm for making the world a better place through innovative energy solutions.

## What We Offer:

- Competitive salary based on experience and knowledge.
- Opportunities for professional growth and learning.
- A dynamic and supportive team environment in a rapidly growing company.
- The chance to work on groundbreaking projects that make a real impact.

## How to Apply:

If you're ready to take on a big challenge and believe you can make a significant contribution to our team, send your CV along with a brief cover letter explaining why this job is perfect for you to [PCM@plussat.eu](mailto:PCM@plussat.eu)
